Subject guide to volume 56

General methods in microscopy
High resolution transmission electron microscopy (HRTEM)
High voltage electron microscopy (HVEM)
Exit wave reconstruction
Three-dimensional reconstruction and stereo microscopy
Electron diffraction
Convergent beam electron diffraction (CBED)
Energy-filtered imaging and diffraction
X-ray microanalysis

Specimen-related methods
Specimen preparation and handling
Microscopic methods, specifically for biological specimens
Microscopic methods, specifically for catalysts and small particles
Microscopic methods, specifically for solid interfaces and multilayers
In situ specimen treatment
Cryomicroscopic methods
Radiation effects (experimental)

Tools
Electron microscope design and characterization
Image processing techniques

Theories
Particle optics
Contrast transfer theory

Miscellaneous subjects
Editorials, Announcements, Comments, Reports, Historical notes

Ultramicroscopy 56 (1994) 360–361

ultramicroscopy

Subject index to volume 56

Contrast transfer theory
Breakdown of the weak-phase object approximation in amorphous objects and measurement of high-resolution electron optical parameters, *Gibson* 56 (1994) 26

Convergent beam electron diffraction (CBED)
Strains in crystals with amorphous surface films studied by convergent beam electron diffraction and high-resolution imaging, *Banhart* 56 (1994) 233
Solving the crystal structure of a submicrometer phase in TEM, *Liu, Eades and Mazumder* 56 (1994) 253

Cryomicroscopic methods
Analysis of transient structures by cryo-microscopy combined with rapid mixing of spray droplets, *Berriman and Unwin* 56 (1994) 241

Editorials, Announcements, Comments, Reports, Historical notes
Foreword to High-Voltage and High-Resolution Electron Microscopy, *Rühle, Phillipp, Seeger and Heydenreich* 56 (1994) ix
Letter to the Editor concerning Ultramicroscopy 53 (1994) 325–331, *Daykin* 56 (1994) xv
Editor's statement about co-authorship, *Kruit* 56 (1994) xvi
Reading matter, *Hawkes* 56 (1994) 337

Electron diffraction
The use of maximum entropy and likelihood ranking to determine the crystal structure of 4-(4′-(N,N-dimethyl)aminobenzylidene)-pyrazolidine-3,5-dione at 1.4 Å resolution from electron diffraction and HREM image data, *Voigt-Martin, Yan, Gilmore, Shankland and Bricogne* 56 (1994) 271

Electron microscope design and characterization
New high-voltage atomic resolution microscope approaching 1 Å point resolution installed in Stuttgart, *Phillipp, Höschen, Osaki, Möbus and Rühle* 56 (1994) 1
Correction of aberrations, a promising means for improving the spatial and energy resolution of energy-filtering electron microscopes, *Rose* 56 (1994) 11
Breakdown of the weak-phase object approximation in amorphous objects and measurement of high-resolution electron optical parameters, *Gibson* 56 (1994) 26

Energy-filtered imaging and diffraction
Theoretical and observed electron microscope images of impurity atoms in thin crystals formed by L-shell ionization electrons, *Endoh, Hashimoto and Makita* 56 (1994) 108

Exit wave reconstruction
Premise-free reconstruction of the exit-surface wave function in HRTEM, *Bierwolf and Hohenstein* 56 (1994) 32

High resolution transmission electron microscopy (HRTEM)
Quantitative HREM using non-linear least-squares methods, *King and Campbell* 56 (1994) 46
Structure determination of metal–ceramic interfaces by numerical contrast evaluation of HRTEM micrographs, *Möbus and Rühle* 56 (1994) 54
Determination of grain boundary volume expansion by HREM, *Buckett and Merkle* 56 (1994) 71
High-resolution transmission electron microscopy studies of dislocation cores in metals and intermetallic compounds, *Mills, Daw and Foiles* 56 (1994) 79
Strains in crystals with amorphous surface films studied by convergent beam electron diffraction and high-resolution imaging, *Banhart* 56 (1994) 233
Solving the crystal structure of a submicrometer phase in TEM, *Liu, Eades and Mazumder* 56 (1994) 253
The use of maximum entropy and likelihood ranking to determine the crystal structure of 4-(4′-(N,N-dimethyl)aminobenzylidene)-pyrazolidine-3,5-dione at 1.4 Å

Elsevier Science B.V.

resolution from electron diffraction and HREM image data, *Voigt-Martin, Yan, Gilmore, Shankland and Bricogne* 56 (1994) 271

High voltage electron microscopy (HVEM)
Electron-diffraction channeling effect on defect formation in Si with ⟨110⟩ zone-axis incidence, *Takeda and Horiuchi* 56 (1994) 144

Image processing techniques
The use of maximum entropy and likelihood ranking to determine the crystal structure of 4-(4′-(N,N-dimethyl)aminobenzylidene)-pyrazolidine-3,5-dione at 1.4 Å resolution from electron diffraction and HREM image data, *Voigt-Martin, Yan, Gilmore, Shankland and Bricogne* 56 (1994) 271
Three-dimensional scatter diagrams: application to surface analytical microscopy, *Kenny, Barkshire and Prutton* 56 (1994) 289
Variable pitch in frozen-hydrated sickle hemoglobin fibers: an image analysis model study, *Lewis, Gross and Josephs* 56 (1994) 303

In situ specimen treatment
High-temperature straining stage for in situ experiments in the high-voltage electron microscope, *Messerschmidt and Bartsch* 56 (1994) 163
On the extraction of high quality data from real-time transmission electron microscopy experiments, *Bithell, Doole and Goringe* 56 (1994) 172
In-situ transmission electron microscopy of grain boundaries in $CuGa_2$, *Sasaki, Murase and Saka* 56 (1994) 184
Defect-flow-induced grain boundary migration with segregation under electron irradiation, *Takahashi, Hashimoto and Watanabe* 56 (1994) 193
In situ ion- and electron-irradiation effects studies in transmission electron microscopes, *Allen* 56 (1994) 200
In-situ observations of irradiation-induced phase transformations, *Kinoshita, Tomokiyo and Nakai* 56 (1994) 216
In situ HREM: application to metal-mediated crystallization, *Sinclair and Konno* 56 (1994) 225

Microscopic methods, specifically for biological specimens
Variable pitch in frozen-hydrated sickle hemoglobin fibers: an image analysis model study, *Lewis, Gross and Josephs* 56 (1994) 303

Microscopic methods, specifically for catalysts and small particles
Interpretation of the {100} fringes in lattice images from the centre of carbon nanotubes, *Cullen, Boothroyd and Humphreys* 56 (1994) 127

Microscopic methods, specifically for solid interfaces and multilayers
Structure determination of metal–ceramic interfaces by numerical contrast evaluation of HRTEM micrographs, *Möbus and Rühle* 56 (1994) 54
Determination of grain boundary volume expansion by HREM, *Buckett and Merkle* 56 (1994) 71
Quantitative analysis of the deformation and chemical profiles of strained multilayers, *Bayle, Deutsch, Gilles, Lançon, Marty and Thibault* 56 (1994) 94
On the role of dislocations in heavily strained $YBa_2Cu_3O_{7-\delta}$, *Verwerft, Dijken, De Hosson and Van der Steen* 56 (1994) 135

Particle optics
Correction of aberrations, a promising means for improving the spatial and energy resolution of energy-filtering electron microscopes, *Rose* 56 (1994) 11

Radiation effects (experimental)
UHVEM and AES analysis of electron-irradiation-induced gold-atom implantation into silicon carbide, *Yasuda, Mori and Maeda* 56 (1994) 121
Electron-diffraction channeling effect on defect formation in Si with ⟨110⟩ zone-axis incidence, *Takeda and Horiuchi* 56 (1994) 144
Defect-flow-induced grain boundary migration with segregation under electron irradiation, *Takahashi, Hashimoto and Watanabe* 56 (1994) 193
In situ ion- and electron-irradiation effects studies in transmission electron microscopes, *Allen* 56 (1994) 200
Dual ion beam irradiation system interfaced with a transmission electron microscope and the observation of defect evolution in Ni during irradiation, *Ishikawa and Furuya* 56 (1994) 211
In-situ observations of irradiation-induced phase transformations, *Kinoshita, Tomokiyo and Nakai* 56 (1994) 216

Specimen preparation and handling
Analysis of transient structures by cryo-microscopy combined with rapid mixing of spray droplets, *Berriman and Unwin* 56 (1994) 241

Three-dimensional reconstruction and stereo microscopy
Restoration of high-tilt electron micrographs using a focus series, *Delaney and Belmont* 56 (1994) 319

X-ray microanalysis
Solving the crystal structure of a submicrometer phase in TEM, *Liu, Eades and Mazumder* 56 (1994) 253
